Amendments to the Specification

Please replace the second paragraph, lines 6-14 on page 10 with the following amended paragraph:

Network data relaying component (e.g., switch, router, computer, etc.) 511 is a network connected component that can be programmed to redirect packets. According to one embodiment, a configuration of the switch can be performed by an RTSP server (e.g., 503). It should be appreciated that many types of switches and routers can be used to implement the network data relaying component 511 according to exemplary embodiments. Such switches may include but are not limited to HP [[ProCurve 530x]] PROCURVE 530X series switches. Moreover, network data relaying component 511 can be implemented using any other type of gateway component that can provide the herein described switch functionality.
